Imprest is Scientia’s project, programme and portfolio management (P3M) solution for the education, local government and housing association markets. It delivers cost savings, reduces risk and saves time by improving the way projects are managed within an organisation.

Imprest provides a ‘one-stop shop’ approach making all project information available in one place. This helps maximise available resources by driving efficiency improvements in project monitoring, control and delivery.

Imprest is highly configurable and can be tailored to the way you want to work. This helps your productivity by ensuring a consistently high standard of project and programme management across departments.

To meet the specific requirements of each organisation, we emphasise a consultative approach and recognise that each client has its own set of requirements and outcomes that it wants to achieve.

“Using Imprest software has brought significant strategic and financial benefits to King’s. It is a hugely powerful tool that allows us to save time and money, while reducing risks and improving the way university projects are managed.”

Brendan Cahill
Senior Programme Manager
King’s College London

“The Imprest software provides us with a single solution for managing all project work and is integrated with our financial system, Agresso, enabling all project information to be monitored and reported from within a single system.”

Gary Ashmore
Head of Estates Development
University of York
Improve the management of your project portfolio. All your information—including documentation—in a single place.

Key features and benefits

**Improves visibility to all stakeholders**
Storing all project, programme and portfolio information in a single place makes it quick and easy for stakeholders to find what they want, when they want it. And the built-in Document Store module promotes collaboration on all types of document.

**Promotes a consistent project management approach**
Consistency of approach is essential for delivering consistent results. Imprest enforces a consistent approach to project delivery. The flexibility and configurability built into the system ensures that it’s your approach and not one dictated by the system itself.

**Simple and intuitive interface**
Intuitive user interface makes it easy to view and manage project and programme information, taking you from a high-level overview to the tiniest detail in just a few clicks.

**Configurable and extensible**
Managing projects and programmes can involve many different types of data. Imprest has built-in features for financial, schedule, risks, issues and more. Bespoke requirements can be accommodated using the built-in customisation feature, without having to write a line of code.

**Comprehensive security model**
Imprest allows you to share project data with stakeholders – internal and external – on your terms, retaining complete control over who can see what.
